

# Risk Treatment Plan – Sweet Bean Café

This Risk Treatment Plan outlines the prioritized actions necessary to mitigate the top 10 cyber security and operational risks identified during the recent risk assessment of Sweet Bean Café. The plan focuses on the immediate implementation of high-impact controls to safeguard customer and financial data, maintain Point-of-Sale (POS) system integrity, and ensure ongoing business continuity. All mitigation tasks are assigned a responsible party and a target completion date, with the initiative commencing on 01 March 2025, to ensure swift accountability and remediation.

| Priority | Risk Summary   | Action  | Responsible   | Target Date | Status      |
|----------|--|---|---------------|-------------|-------------|
| High     | Unsecured Wi-Fi allowing unauthorized access to the network. | Implement <b>WPA2-Enterprise</b> security protocols or establish separate VLANs for Guest, Staff, and POS traffic.                | IT Consultant | 31 Mar 2025 | Not Started |
| High     | Lack of anti-malware protection on POS systems.              | Install and configure a monitored, centrally-managed <b>anti-malware solution</b> on all POS terminals and back-office computers. | Store Manager | 15 Mar 2025 | Not Started |
| High     | Outdated operating   | Audit all devices and   | IT Consultant | 30 Apr 2025 | Not Started |

|               |   |   |               |             |             |
|---------------|---|---|---------------|-------------|-------------|
|               | systems and POS software with known vulnerabilities.                | promptly apply all pending <b>OS and application updates</b> . Establish a mandatory monthly patching schedule.                         |               |             |             |
| <b>High</b>   | Employee reuse of weak or shared passwords across critical systems. | Implement a mandatory <b>strong password policy</b> (min 12 chars, complexity) and provide access to a password manager tool for staff. | HR/Training   | 15 Apr 2025 | Not Started |
| <b>Medium</b> | Loss or theft of a physical POS terminal device.                    | Secure all POS terminals with physical <b>security anchors</b> or locks. Implement a remote wipe capability for emergency use.          | Store Manager | 31 Mar 2025 | Not Started |

|        |  |   |               |             |             |
|--------|--|---|---------------|-------------|-------------|
| Medium | No formal process for backing up critical digital data (e.g., recipes, inventory). | Implement a <b>daily, automated , and encrypted cloud backup</b> solution for all critical business files and configurations. | IT Consultant | 15 Apr 2025 | Not Started |
| Medium | Physical security weakness for network equipment (router/switch/NVR).              | Install all network hardware within a dedicated, locked, and <b>physically secured cabinet</b> or closet.                     | Store Manager | 31 May 2025 | Not Started |
| Medium | Phishing attempts targeting staff through company email.                           | Conduct mandatory, hands-on staff <b>training on recognizing phishing</b> and social engineering attacks before 30 April.     | HR/Training   | 30 Apr 2025 | Not Started |
| Medium | Lack of formal processes for   | Create and document a mandatory user  | HR            | 31 May 2025 | Not Started |

|            |   |  |             |             |             |
|------------|---|--|-------------|-------------|-------------|
|            | employee onboarding and offboarding .                                   | provisioning and <b>de-provisioning checklist</b> to ensure timely account creation/revocation.                                |             |             |             |
| <b>Low</b> | Insufficient data retention policy for customer loyalty/marketing data. | Review and formally <b>document the data retention policy</b> to ensure alignment with local and regional privacy regulations. | Legal/Owner | 30 Jun 2025 | Not Started |

Start Date of Plan Execution: 01 March 2025
